Outline

- **Part 1 (completed)**: Building software frameworks for effective and robust LLM agents in research

- **Part 2 (completed)**: Multi-agent LLM systems and complex tasks

- **Part 3 (proposed)**: Learning to decompose complex tasks and delegate to sub-agents

- **Part 4 (proposed)**: "Overhearing" LLM agents that help users from the background

2

Outline

- **Part 1 (completed)**: Building software frameworks for effective and robust LLM agents in research
- **Part 2 (completed)**: Multi-agent LLM systems and complex tasks
- **Part 3 (proposed)**: Learning to decompose complex tasks and delegate to sub-agents
- **Part 4 (proposed)**: "Overhearing" LLM agents that help users from the background

Works Presented

- *Kani: A Lightweight and Highly Hackable Framework for Building Language Model Applications*. NLP-OSS @ EMNLP 2023.
- *ReDel: A Toolkit for LLM-Powered Recursive Multi-Agent Systems*. EMNLP 2024 Demo.
- *FanOutQA: A Multi-Hop, Multi-Document Question Answering Benchmark for Large Language Models*. ACL 2024.
- *Overhearing LLM Agents: A Survey, Taxonomy, and Roadmap.* Preprint, 2025.
