Recursive Delegation with Kani

Using other LLMs as tools

```
# save the sub-agent's final result to return to the parent
```

```
chat_in_terminal(root_agent)
```

```
root_agent = RecursiveMultiAgentKani(engine)
```

@ai_function()

```
# additional tools for each agent...
```

```
async def delegate(self, instructions: str):
```

```
result = msg.text
```

```
"""Delegate a smaller part of the current task to a helper agent."""
```

```
result = None
```

```
sub_agent = RecursiveMultiAgentKani(engine)
```

```
async for msg in sub_agent.full_round(instructions):
```

```
return result
```

```
class RecursiveMultiAgentKani(Kani):
```
