Research Question

Learning to Delegate

- ReDel already grants a significant performance boost to complex tasks with *no domain-specific prompting or fine-tuning*

- But there's still room to improve!
  - We could try optimizing the prompts to avoid overcommitment and undercommitment...
  - But we'd like to learn the whole process end-to-end!

- RQ: **How can LLM agents learn to effectively decompose and delegate tasks across domains?**

43
