Recursive Delegation with Kani

Using other LLMs as tools

```
class RecursiveMultiAgentKani(Kani):
  @ai_function()
  async def delegate(self, instructions: str):
    """Delegate a smaller part of the current task to a helper agent."""
    sub_agent = RecursiveMultiAgentKani(engine)
    result = None
    async for msg in sub_agent.full_round(instructions):
      # save the sub-agent's final result to return to the parent
      result = msg.text
    return result

  # additional tools for each agent...

root_agent = RecursiveMultiAgentKani(engine)
chat_in_terminal(root_agent)
```
