Kani

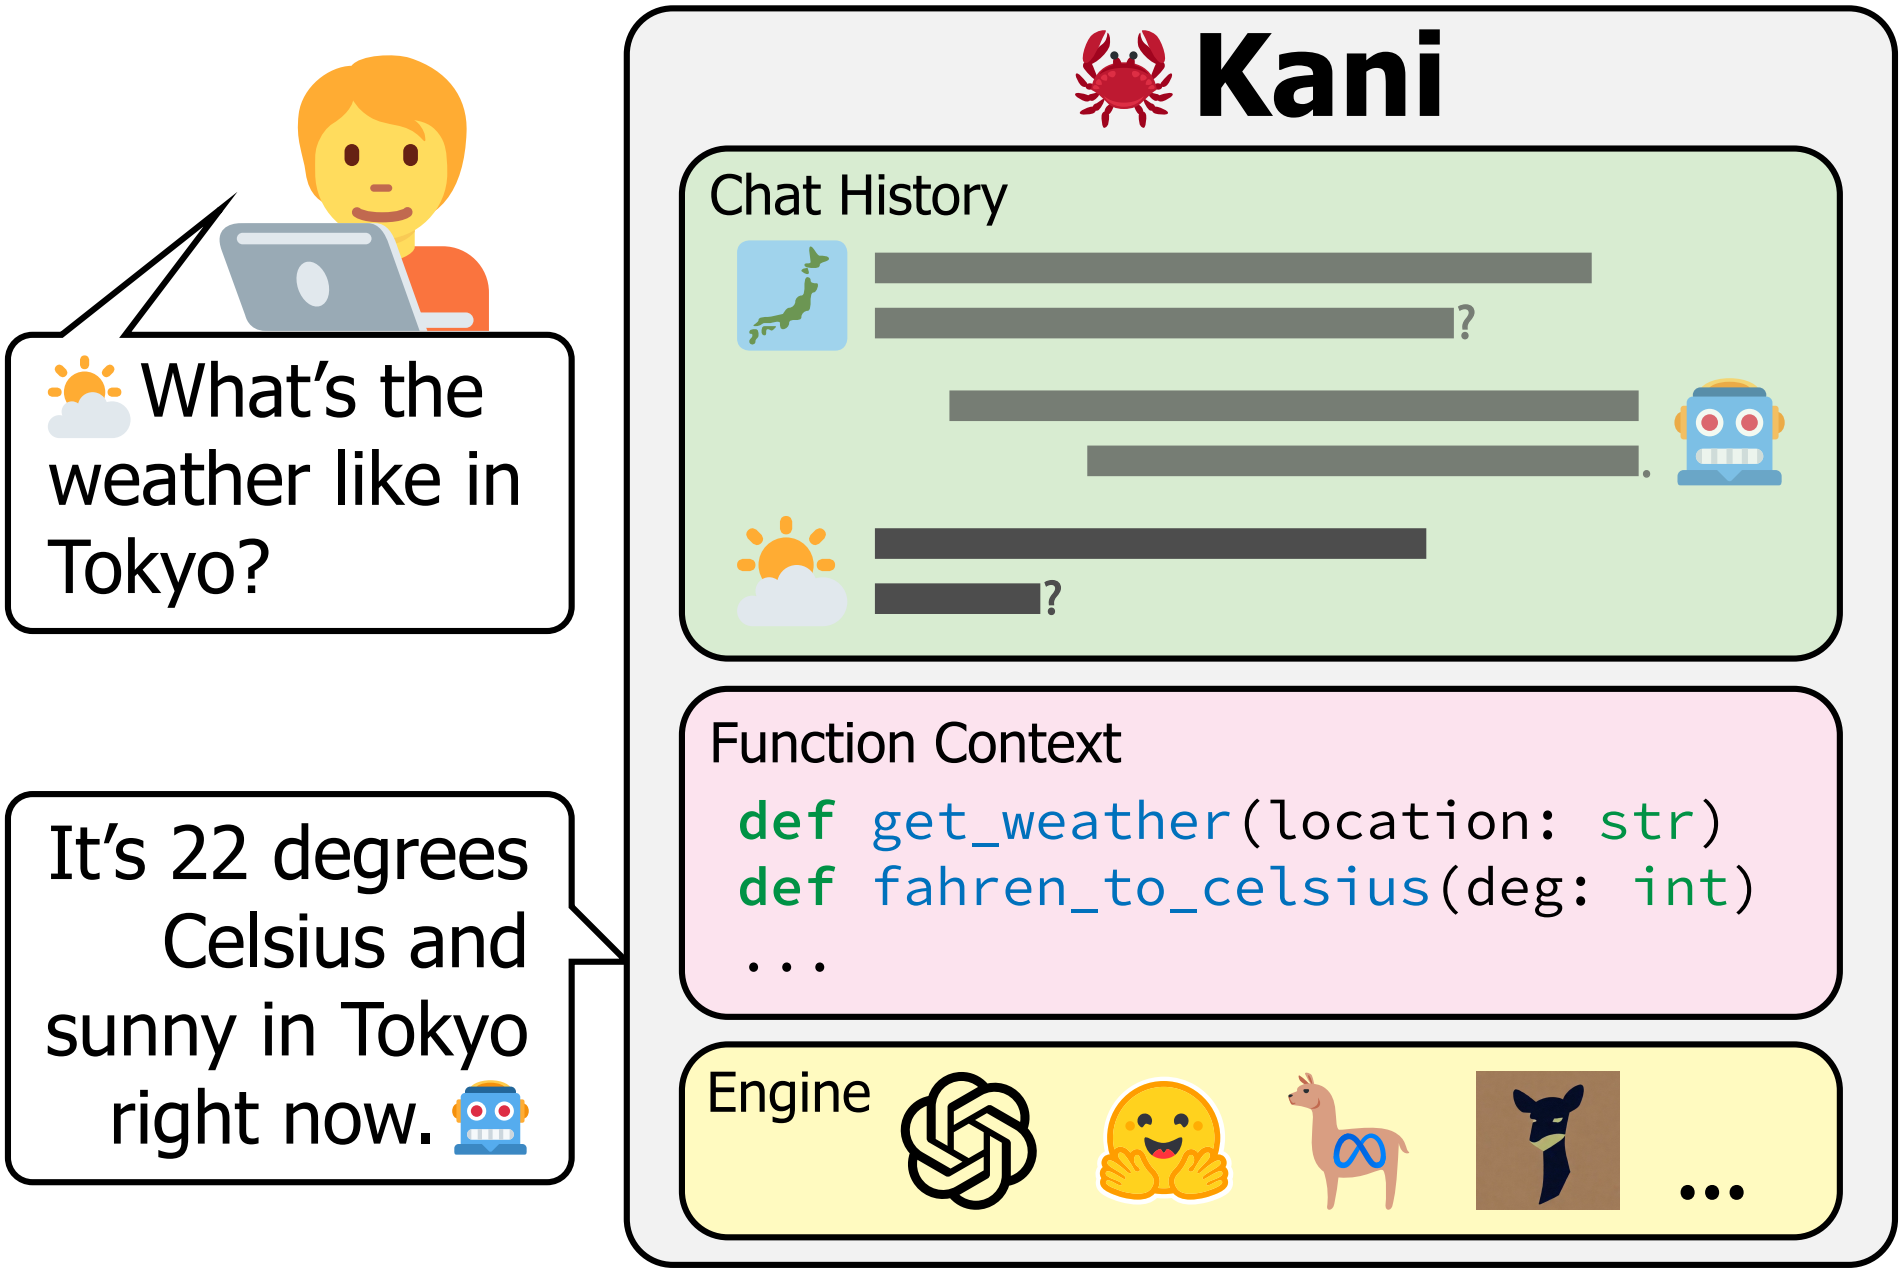
A Lightweight and Highly Hackable Framework for LLM Agents

- Kani implements the LLM agent primitives: querying models, managing chat history, and handling function calls

- Allows developers to write robust code and tools that are interoperable across any underlying LLM

- Developers can override core features to implement more complex functionality

- Designed to be lightweight and hackable, implementing universally useful core features



Kani
Chat History
What's the weather like in Tokyo?
It's 22 degrees Celsius and sunny in Tokyo right now.
Function Context
def get_weather(location: str)
def fahren_to_celsius(deg: int)
