Tool Usage in Kani

Provide Plain Python Code to Models

model access to a real-time

Python methods and

weather API

- Tools are written as plain

parameters are valid by the

time they reach developer

- In this example, we give a

decorated with the special

code

- Kani guarantees that

`@ai_function` decorator

```
engine = OpenAIEngine(api_key, model="gpt-4")
```

USER: What's the weather in San Francisco?

```
# AI: [get_weather({"loc": "San Francisco"})]
```

AI: It's currently 72F in San Francisco.

```
def get_weather(self, loc: Annotated[str,
```

```
# ... Query some weather API
```

```
"""Get the weather in a given location."""
```

```
chat_in_terminal(WeatherKani(engine))
```

```
@ai_function()
```

```
class WeatherKani(Kani):
```

```
AIParam(desc="The desired city")]):
```

```
return weather
```

```
# TOOL: {"temp": 72, ...}
```
