Tool Usage in Kani

Provide Plain Python Code to Models

- In this example, we give a

time they reach developer

decorated with the special

model access to a real-time

- Kani guarantees that

- Tools are written as plain

Python methods and

`@ai_function` decorator

weather API

code

parameters are valid by the

```
# ... Query some weather API
```

```
def get_weather(self, loc: Annotated[str,
```

```
AIParam(desc="The desired city")]):
```

```
engine = OpenAIEngine(api_key, model="gpt-4")
```

```
# AI: [get_weather({"loc": "San Francisco"})]
```

```
chat_in_terminal(WeatherKani(engine))
```

USER: What's the weather in San Francisco?

AI: It's currently 72F in San Francisco.

```
class WeatherKani(Kani):
```

```
"""Get the weather in a given location."""
```

```
# TOOL: {"temp": 72, ...}
```

```
return weather
```

```
@ai_function()
```
